SUMMARY

I design and engineer digital products from zero to live — story platforms, storefronts, and layout systems — delivered in writing, with no calls or meetings. I work AI-assisted, then verify by hand on phone, tablet, and desktop, and revise until the product works on the client's device.

SERVICES

- **Bilingual / custom web platforms** — a full product: reading, writing, accounts, and search, in Bangla and English.
- **E-commerce + bKash / Nagad checkout** — a live storefront with a real menu, payment proof, and kitchen alerts.
- **Responsive UI overhaul** — broken mobile layouts repaired: sideways scrolling, cut-off titles, squeezed cards, buttons too small to tap, and stretched images.
- **High-conversion landing pages** — a simple page that explains the offer, shows prices, and lets visitors message to order.

WORK

- **GolpoNeer** (golponeer.com) — a live Bangla and English story platform: 38 stories, 511 chapters, 1,139,932 words, reading and writing free, forever. AI-assisted build that I directed, tested, published, and operate; I did not hand-code it alone. Method stated honestly on the portfolio.
- **Sweet Cravings** (sweetcravingsrajshahi.com) — a live dessert storefront for a shop in Rajshahi: real menu, checkout, bKash / Nagad payment, and automated Telegram alerts to the kitchen.
- **Sweet Cravings Admin** — the operations side of the same shop: order management, tiered daily order caps, a loyalty reward, and payment verification by transaction ID.
- **Responsive Lab** — hands-on engineering demos: a landing page demo (menu filter, order builder, FAQ) and a layout-fix demo (the same cards shown broken, then fixed, in a 360px phone frame: five named bugs, a code-diff view, and a checked-after-fix list). musabbirrahman.vercel.app/demos/landing • musabbirrahman.vercel.app/demos/layout-fix

SKILLS — CURRENT, DELIVERABLE NOW

HTML, CSS, JavaScript (ES6+), TypeScript • React, Next.js, Tailwind CSS, Framer Motion • Supabase, Turso, Cloudflare Workers, Vercel • bKash / Nagad payments, Telegram bots • Gemini API • Bilingual Bangla / English typography • AI-assisted development • 12-viewport manual QA • Git and GitHub

HOW I WORK

No calls, no meetings — the whole job runs in writing, in three steps: (1) written brief and scope lock, (2) a staging link tested on real viewports, (3) zero-meeting iteration until verified.

EDUCATION

- **BSc in Computer Science & Engineering** — Brahmaputra International University, 2026 – Present
- **Higher Secondary Certificate (Science)** — Ghatail Cantonment Public School and College, 2025, GPA 3.67
- **Secondary School Certificate (Science)** — Lighthouse Lab. School and College, 2023, GPA 5.00

COMPLETED COURSES — CERTIFICATES EARNED, NOT CURRENT SPECIALIZATION

Programming Hero full-stack bootcamp (completed) • IBM React Development (certificate) • IBM Web Development Fundamentals (certificate). These are completed learning. A long gap without practice means I do not present that stack as my current specialization; it returns only after a refreshed project proves it again.
